CoinFabrik

Audits
Services

Coinfabrik offers a comprehensive smart contract audit process to ensure code quality and prevent potential losses. Our process involves code and documentation evaluation, review, and audit to identify technical and logical errors, as well as a report submission for review and correction. Throughout the process, we maintain communication with our clients to ensure a clear audit.

Audit process

Contact　　**Price & Timeline**　　**Audit Process**　　**Report**

To get started with our audit process, simply provide us with your project website, source code links, and system documentation. We will then evaluate the code and documentation, and provide a quote and timeline for completion. Due to limited auditors, it is necessary to book in advance.

Why audit a smart contract?

Smart contract audits are essential to detect common vulnerabilities: such as buffer overflow and underflow, reentrancy, reordering, signature replay, and short address attacks. Our auditors run a compiler and their own scripts to analyze the code and ensure its viability, complexity, and purpose. The audit duration depends on the code's length, complexity, and documentation provided.

Delivery

After the audit is complete, we provide a detailed PDF report summarizing the audit process, findings, enhancements, and conclusions. AThe report can be corrected by the client and, with their permission, published on our blog to enhance transparency and accountability.

About us

Coinfabrik is a renowned web3 security company with over 20 years of experience, 10 of which were dedicated to blockchain security. We have audited over 170 smart contracts, including those of successful ICOs such as Status and Patientory, and have been listed in multiple top blockchain and security audit companies lists. Our audits add prestige and trust to smart contracts.

Request a security audit

To request an audit, simply provide us with your code and timeline for completion. The audit cost varies depending on the code's complexity and timeline for completion.
Our auditors are notified and a telegram group is created for clarifications. By choosing Coinfabrik for your smart contract audit, you are making an investment in preventing potential losses and ensuring the quality of your code.
